(S.S) $\triangle ABD \sim \triangle AFC$ ∴

$\frac{BD}{FC} = \frac{AD}{AC}$

$\angle DAC = \angle DAF + \angle FAC$ ∴
 $= \angle DAF + \angle BAD = \angle BAF$

(AC & BD) $\angle ABC = \angle ADC$

(S.S) $\triangle BAF \sim \triangle DCA$ ∴
 $\frac{BF}{AF} = \frac{AC}{AD} = \frac{AB}{DC}$

$\frac{DC}{BF} = \frac{AC}{AF} = \frac{AD}{AB}$

$AB \cdot DC = BF \cdot AD$
 $AC \cdot BD = FC \cdot AD$ ∴

$AB \cdot DC + DC \cdot BD = AD(BF + FC)$

$AB \cdot DC + DC \cdot BD = AD \cdot BC$
