

(12+)

$$y = x^3 + 5 \xrightarrow{+5} y' = 3x^2$$

$$x = \sqrt[3]{y-5} \xrightarrow{+5} x' = \frac{1}{3\sqrt[3]{(y-5)^2}} = \frac{1}{3\sqrt[3]{(x^3+5-5)^2}} = \frac{1}{3x^2} \quad \left\{ \begin{array}{l} y' \cdot x' = 1 \end{array} \right.$$
