$$AB \sim \text{CD} \quad \text{D/F} \sim \text{B/C}$$

$$AB = \sqrt{3} \quad F = \sqrt{3}$$

$$CD = \frac{\sqrt{3}}{2}a \quad \text{D/F} = \frac{\sqrt{3}}{2} \quad (\text{D/F} = \frac{\sqrt{3}}{2})$$

$$\angle FCD \sim \angle BCA \quad \text{D/F} = \frac{\sqrt{3}}{2}$$

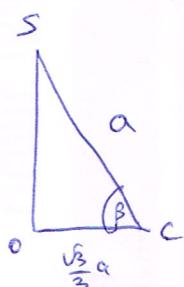

$\triangle ABC \sim \triangle SC \rightarrow \angle ABC \sim \angle SC$

$\angle ABC = 60^\circ \rightarrow \angle SC = 60^\circ$

$\angle SC = 60^\circ \rightarrow \angle FCD = 60^\circ$

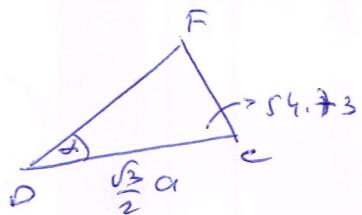

$\angle FCD = 60^\circ$

$$OC = R_{\text{circle}} = a \cdot \frac{\sqrt{3}}{2} \cdot \frac{2}{3} = \frac{\sqrt{3}}{3}a$$

$$\cos \beta = \frac{\frac{\sqrt{3}}{3}a}{a} = \frac{\sqrt{3}}{3} \rightarrow \boxed{\beta = 54.73^\circ}$$

$\angle FDC = 90^\circ - \beta = 35.27^\circ$

$$\frac{FD}{\sin(54.73)} = \frac{\frac{\sqrt{3}}{2}a}{\sin(35.27)}$$

$$FD = \frac{\sin(54.73) \cdot \frac{\sqrt{3}}{2}a}{\sin(35.27)}$$

$$S_{ADF} = \frac{DF \cdot AB}{2} = \frac{\frac{\sqrt{3}}{2}a^2 \sin(54.73)}{4 \sin(2 + 54.73)}$$
